MAN MEETS AI

Ship by Sunday Student Workbook

A branded, print-ready workbook for students moving from idea to live app in one focused sprint. This edition adds stronger identity, visible progress markers, built-in worksheets, a public commitment ritual, and a rescue path when the build gets stuck.

Action-first	Print-ready	Trainable	Global rollout

What this packet is for

A branded, print-ready workbook for students moving from idea to live app in one focused sprint. This edition adds stronger identity, visible progress markers, built-in worksheets, a public commitment ritual, and a rescue path when the build gets stuck.

Included in this edition

- Builder Oath and shipping identity ritual
- 4-block sprint map with visible completion stamps
- Embedded worksheets for CEO, Design, Build, and Ship
- Sunday Test, public commitment, and default stack rules
- 30-minute rescue path so students can still cross the finish line
- Canonical example build story to reduce ambiguity

Operating principle

This sprint is not designed to be consumed. It is designed to be completed. Ugly and finished beats elegant and imaginary.

Use with calm authority. Keep the pace moving. Every lesson ends in an action and a visible artifact.

How to use this workbook

Move through the sprint in order. Do not skip ahead. Every section asks for a visible output. Fill the lines, use the checkboxes, and keep the packet physically marked up so progress stays real.

Rule	What it means
Do the rep	Pause after each lesson and complete the artifact before moving on.
Stay narrow	Version one must be small enough to ship by Sunday.
Use one default path	Do not shop for tools mid-sprint. Build with the default stack.
Share imperfect work	Live and shared beats hidden and almost finished.

Builder Oath

Read this out loud before you begin:

I ship working software.
I do not chase perfect ideas.
I do not hide unfinished work.
I make small things real.

My commitment for this sprint

Sprint map and checkpoints

The four blocks below create visible progress. Mark each one complete only when the artifact exists.

Block checkpoints	Done
CEO Block complete — problem chosen, user defined, MVP scoped	
Design Block complete — core flow mapped, main screens sketched, build-ready spec done	
Build Block complete — local environment working, first screen implemented, core flow runs	
Ship Block complete — live URL deployed, demo recorded, first sends complete	

The Sunday Test

Before you enter Build, ask: **If this is the only thing that works by Sunday, is the promise still true?**

If the answer is no, cut more scope.

Block	Goal	Artifact
CEO	Choose the pain, user, outcome, and version-one boundaries	One-Page Product Brief
Design	Turn the idea into a buildable sequence of screens	Build-Ready Design Spec
Build	Implement the core flow using one default path	Build Plan + Agent Brief + working local app
Ship	Deploy, share, gather feedback, and plan version two	Launch Plan + Feedback Tracker + live URL

Worksheet 01 — CEO Block

Problem. User. Outcome. Scope. This page is a gate. Do not move on with placeholders.

1. Three candidate problems worth solving

2. One user statement — “This app is for…”

3. Outcome statement — what changed state does the user get?

Quick research note	What they do well	What they do poorly	What users care about
Solution 1			
Solution 2			
Solution 3			

CEO Block continued

4. Core flow in 5–7 steps using only words and arrows

r version one	Out of scope until version two	

5. Final one-sentence product promise

CEO Block sign-off

You may move to Design only if another person could read this brief in under a minute and understand what the app does, who it is for, and what version one includes.

Worksheet 02 — Design Block

Flow. Screens. Direction. The goal is not beauty. The goal is buildability.

Reference	Why it matters	Pattern to borrow
Reference 1		
Reference 2		
Reference 3		
Reference 4		
Reference 5		

Sketch notes — what are the main screens and what must be visible on each?

Storyboard step	Screen / moment	Key action	Outcome
1			
2			
3			
4			
5			

Design Block continued

Rough screen list — which 3–5 screens will you actually create?

Visual direction — write 3 style rules (type, spacing, contrast, tone)

Build-ready checklist	Done
The main flow exists screen by screen	
The main screens are sketched or framed in Figma	
A simple visual direction is chosen	
The app still feels small enough to build this weekend	

Design Block sign-off

If the product still feels foggy, do not open the code editor yet. Tighten the sequence until the build path feels obvious.

Worksheet 03 — Build Block

Stack. Agent. Product. Build from the brief, not from vibes.

Default tech path

Frontend: Next.js
UI: Tailwind CSS
Data/Auth: Supabase or hardcoded data if needed
Deploy: Vercel

Use this path unless the instructor explicitly approves a different one.

Agent brief — describe the user, problem, core flow, screen order, and version-one boundaries

Build Block continued

Build slice	Definition of done	Complete
Environment running locally	Starter project runs in browser	
First screen	The first meaningful screen matches the brief	
Core flow step 2		
Core flow step 3		
Core flow step 4		
Core promise test	A user can reach the outcome end to end	

Bug / blocker	Observed behavior	Ask the agent to fix	Resolved

30-minute rescue protocol

If you are stuck, shrink the app until it can still ship:
1. Cut to one core flow.
2. Remove login if possible.
3. Hardcode data if needed.
4. Ship one screen if that is enough to prove the promise.
5. Ignore cosmetic polish until after the URL is live.

Worksheet 04 — Ship Block

Deploy. Share. Launch. The goal is a live URL and real human feedback.

Ship checklist — what absolutely must work before this app is allowed to ship?

Live URL

30–60 second demo script — entry, action, outcome

Person	Channel	Date sent	Main reaction / signal

Ship Block continued

Feedback type	What came in	Priority
Confusion		
Bug		
Compliment / signal of value		
Feature request		

Top 3 improvements for version two

Public commitment

Before you build, share this with the group or your instructor:

What I'm shipping by Sunday: _____

Public commitment raises follow-through and reduces private drift.

Final student scorecard	Done
Problem chosen and narrowed	
User and outcome are clear	
Flow mapped in 5–7 steps	
Main screens exist	
Core flow runs locally	
Live URL exists	
App was sent to real people	
Version-two priorities are written down	

Finish line

Live beats stuck. Shared beats hidden. Finished beats almost. Once the app is live and the first sends are done, the rep counts.
