MAN MEETS AI

SHIP BY SUNDAY

Student Worksheet Packet

Printable worksheets for the 4-block sprint

This sprint is not designed to be consumed. It is designed to be completed.

Worksheets included:

01 — One-Page Product Brief
02 — Build-Ready Design Spec
03 — Build Plan + Agent Brief
04 — Launch Plan + Feedback Tracker

How to use this packet

Print or duplicate	Use this as a printable packet, or mark it up digitally on your iPad while moving through the sprint.
Do the rep	Each worksheet exists to produce a visible artifact. Fill it in before moving to the next block.
Stay ugly + honest	Do not try to be impressive. Clarity beats cleverness. Rough answers are fine. Empty answers are not.
Finish the spine	Version one wins when the core flow works end to end. Do not let extras kill the weekend.

Sprint artifacts

Block	Primary outcome	Final artifact
Overview	Set up your workspace and understand the path	Templates duplicated + workspace ready
CEO	Choose the problem, user, outcome, flow, and scope	Worksheet 01 complete
Design	Turn the idea into screens and a buildable direction	Worksheet 02 complete
Build + Ship	Build, deploy, share, and capture feedback	Worksheets 03 + 04 complete

Worksheet 01

One-Page Product Brief

Use this to decide what you are building before you touch design or code.

Block	Goal	Output
CEO	Choose a real problem, a specific user, a clear outcome, and a shippable Sunday scope.	A brief someone else could understand in under a minute.

1. Start with the problem

List 3 candidate problems from your life or work that are annoying enough to be worth solving this weekend.

_____

_____

_____

_____

2. Pick one user

Complete this sentence: “This app is for _____ who need _____ without _____.”

_____

_____

_____

3. Define the outcome

Write one plain-English sentence that describes the changed state for the user. What becomes easier, faster, clearer, safer, or less painful?

_____

_____

_____

4. Light research notes

Existing solution	What it does well	What it does poorly	What users seem to care about

5. Map the core flow

Draw or write the core user flow in 5–7 steps using only words and arrows at first. Start, middle, end, and the moment value is delivered.

_____

_____

_____

_____

6. Kill scope

In scope for Sunday	Out of scope / version two

CEO block done when…

- ☐ I chose one real problem, not a vague AI feature.
- ☐ I defined one specific user in one specific situation.
- ☐ I can explain the user outcome in one sentence.

☐ My core flow is simple enough to build in a weekend.

☐ I cut at least 3 things that do not belong in version one.

Worksheet 02

Build-Ready Design Spec

Turn the idea into references, sketches, screens, and a visual direction that is clear enough to build from.

Block	Goal	Output
Design	Remove ambiguity before code starts. Make the product feel obvious.	A build-ready spec with references, storyboard, rough screens, and style rules.

1. Reference board

Reference / source	Pattern to borrow	Why it matters for this product

2. Rough screen sketches

Sketch the core screens on paper. Label the main content areas, key actions, and transitions. Ugly is fine. Ambiguous is not.

_____

_____

_____

3. Storyboard the journey

Step	Screen / moment	What the user is doing or feeling
1		
2		
3		
4		
5		

4. Rough digital screens

Create 3–5 rough screens in Figma. Use this area to list the screens you made and the notes the build phase will need.

_____

_____

_____

_____

5. Visual direction

Typeface / general feel

Spacing / density rule

Contrast rule

Primary interaction rule

Anything to avoid

Design block done when…

☐ I gathered 3–5 references instead of designing from a blank brain.
☐ I translated the flow into rough sketches.
☐ I storyboarded the experience screen by screen.
☐ I created rough digital screens for the core flow.
☐ I wrote 3 simple style rules so the build has direction.

Worksheet 03

Build Plan + Agent Brief

Use this to build from clarity instead of vibes.

Block	Goal	Output
Build	Translate the brief and spec into a working local app, one slice at a time.	A completed agent brief, build sequence, and local test plan.

1. Default stack + starting point

Write the default build path you are using for this sprint. Keep it simple and fixed. Example: starter repo, framework, deployment target, and any required services.

_____

_____

_____

2. Agent brief

Product in one sentence

User + pain

Core outcome

Screen order / core flow

Version-one boundaries
Definition of done for first slice
Important constraints / non-negotiables

3. Build sequence

Order	Screen / step	What done means	Test before moving on
1			
2			
3			
4			
5			

4. Debug without spiraling

Issue / bug	Blocker or cosmetic?	Exact prompt / fix request to the agent

Build block done when…

☐ My agent brief is based on the brief and spec, not a one-shot vibe prompt.

☐ I am asking the model for one screen or one step at a time.

☐ The main path works locally from entry to outcome.

☐ I fixed blockers first and ignored cosmetic rabbit holes.

☐ I know exactly what still needs polish after ship.

Worksheet 04

Launch Plan + Feedback Tracker

Get the app live, package it, send it to humans, and turn the weekend into momentum.

Block	Goal	Output
Ship	Deploy the app, record a simple demo, send it out, and log what comes back.	A live URL, 5 sends, first feedback, and version-two priorities.

1. Ship the core, not the fantasy

Write the short checklist of what absolutely must work before this app is allowed to ship.

_____

_____

_____

Live URL *(Paste the deployed link here)*

_____

Demo clip location *(Where is the 30–60 second walkthrough saved?)*

_____

2. Outreach list

Person	Why they are a good first user	Sent?	Response / signal
		☐	
		☐	

☐

☐

☐

3. Simple send script

Draft the exact message you will send with the app link and the 2–3 questions you want answered.

_____

_____

_____

_____

4. Feedback tracker

Feedback	Bucket	Severity / frequency	Action

Bucket key: confusion / compliment / bug / feature request

5. Version-two priorities

Choose the top 3 improvements for version two. Rank them in order and explain why they matter.

_____

_____

_____

_____

Ship block done when…

- ☐ The core flow is live at a real URL.
- ☐ I recorded a short demo clip.
- ☐ I sent the app to 5 real humans.
- ☐ I logged the first feedback cleanly.
- ☐ I chose the top 3 priorities for version two.
