Ship by Sunday Facilitator Certification Rubric

A printable evaluation packet for training, observing, and certifying future Ship by Sunday facilitators. Use this during mock delivery, live cohort observation, or instructor onboarding.

Action-first	Print-ready	Trainable	Global rollout

What this packet is for
A printable evaluation packet for training, observing, and certifying future Ship by Sunday facilitators. Use this during mock delivery, live cohort observation, or instructor onboarding.

Included in this edition

- Certification standards aligned to the SDS teaching model
- Observation rubric with weighted scoring
- Artifact enforcement, timing, and intervention criteria
- Common failure modes and remediation notes
- Decision page for approve / provisional / not yet
- Renewal and maintenance checklist

Operating principle
A certified facilitator does not just explain the sprint. They produce student movement, protect scope, and preserve the integrity of the rep.

Use with calm authority. Keep the pace moving. Every lesson ends in an action and a visible artifact.

Certification standards

Domain	What good looks like
Posture	Calm, direct, slightly demanding, action-first.
Sequence	Teaches the four blocks in order and protects the artifact chain.
Scope discipline	Cuts features aggressively and uses the Sunday Test correctly.
Diagnostic skill	Recognizes red flags and chooses the smallest effective intervention.
Build coaching	Uses the default stack and guides one-screen-at-a-time prompting.
Shipping behavior	Gets students to a live URL and real sends instead of endless polishing.

Scoring guidance

Use the weighted rubric that follows. A facilitator can be approved only if they score at least 80 overall **and** do not fail any critical category. Critical categories are marked with an asterisk.

Weighted certification rubric

Category	Weight	1 — weak	3 — adequate	5 — excellent	Score
* Teaching posture	15	Rambling, apologetic, or vague.	Mostly clear but inconsistent.	Calm, direct, authoritative, and action-first.	
* Artifact enforcement	15	Lets students proceed without them.	Sometimes checks artifacts.	Uses artifacts as hard gates throughout.	
* Scope control	15	Allows fantasy scope.	Cuts scope late or unevenly.	Cuts early, clearly, and confidently.	
* Diagnostic interventions	15	Does not identify root cause.	Finds some issues but overteaches.	Quickly diagnoses and applies the smallest fix.	
Build coaching	10	Prompts from vibes or tool docs.	Mostly structured but drifts.	Brief-driven, one-screen-at-a-time, default stack intact.	
Timing & flow	10	Sessions drag or fragment.	Adequate pace.	Keeps strong momentum and clean transitions.	
Psychological safety + pressure	10	Too harsh or too soft.	Acceptable tone.	Creates confidence without lowering standards.	
Shipping follow-through	10	Avoids launch or user sends.	Gets partial completion.	Forces URL, sends, and logged feedback.	

Observation notes

Critical failure triggers

Trigger	Why it matters	Automatic status
Teaches without requiring artifacts	Breaks the core SDS model	Not yet certified
Encourages large, fuzzy scope	Destroys the likelihood of a weekend ship	Not yet certified
Lets students skip the live URL / send step	Removes the identity-forming close of the sprint	Not yet certified
Uses non-standard stack without reason	Reduces teachability and troubleshooting consistency	Provisional at best
Turns Build into theory rather than implementation	Breaks the action-first promise	Provisional at best

Evaluator prompts

Use these during observation:

- What artifact should exist right now?
- What is the smallest version that still makes the promise true?
- Is the facilitator reducing fog or adding more information?
- Are students moving, or merely listening?

Mock facilitation checklist

Before observation	Done
Facilitator knows the four-block sequence	
Facilitator understands the Builder Oath and public commitment ritual	
Facilitator can explain the Sunday Test without notes	
Facilitator can coach the default stack and deployment path	
Facilitator can run the 30-minute rescue flow	

During observation	Done
Opened with a clear frame and behavior expectations	
Used one example before commanding the rep	
Asked for concrete artifacts at returns	
Caught and corrected scope expansion	
Protected the core flow during Build	
Pushed students to deploy and send	
Closed with identity reinforcement and version-two planning	

Certification decision

Overall score	Critical category failures?	Decision

Strengths observed

Remediation required before approval

Decision bands

Approved: 80+ overall and no critical failures.
Provisional: 70–79 or one non-critical weakness that needs supervised delivery.
Not yet: below 70 or any critical failure.

Evaluator name	Date	Signature

Renewal and maintenance

Use this page to keep facilitator quality consistent over time.

Maintenance area	Expectation	Status / notes
Delivery consistency	Uses the standard language and artifact gates across cohorts	
Stack consistency	Teaches the default path unless updated centrally	
Student outcomes	Most students reach a real artifact at each block	
Shipping rate	Students regularly reach a live URL or documented rescue ship	
Feedback hygiene	Facilitator gathers student friction points and reports them upstream	

Reminder

The goal of certification is not to create charismatic personalities. It is to create reliable facilitators who preserve the psychology and mechanics of the Ship by Sunday rep.
